How Much Could You Save With Solar Panels?

Solar panels could be a great way to save on your bills and lower your carbon footprint and getting them installed on your home helps you create your own electricity, which will lower your fossil fuel use and save you money in the long run. Times are tough in the UK right now and as a result, many people are looking for new ways to save money - we think solar is a great way to do it!

In this article, we'll look at some of the benefits of solar panels and some things to consider before you buy them.

Go solar - with packages starting from as little as £50 per month and zero to pay upfront!

Why Solar Panels?

Solar panels can bring lots of benefits to homeowners;

- Save energy: Of course, the key aim here is to save energy which saves money in the long term. Generating your own electricity through solar will help you reduce your reliance on the grid and lower your energy bills. This is the goal of many UK homeowners today.

- Good for the planet: Solar-generated energy is clean energy. Therefore, solar panels reduce greenhouse gas emissions, making them an eco-friendly choice for homeowners who are trying to look after the planet.
- Higher home value: Installing the panels can add value to your home making it more of an attractive option for potential buyers in the future. So it is a long-term investment opportunity.
- Long-term savings: Buying and installing solar panels is a large initial investment. However, they can save you money in the long run by reducing your energy bills. Most believe they are worthwhile investments despite the upfront cost. You can also sell back to the grid any

electricity you don't use, making a few extra pounds here and there.

Solar payment options to suit any budget!

Before you buy…

Solar panels are a great way to save money on electricity bills. However, they are a significant investment and you should do your research before investing. Before purchasing your panels, consider the following points:

- Research: Look for reputable solar panel companies in your area and compare prices, warranties, and customer reviews. This will give you the best chance of getting a good value deal and therefore a more worthwhile long-term investment.
- Grants: In the UK, there are lots of government-backed schemes that offer money to install solar panels. For example, the ECO4 grant, Smart Export Guarantee (SEG) and the Renewable Heat Incentive (RHI). Check if you qualify for any of these grants before spending your own money.
- Suitability of your home: Solar panels work best when you install them on a south-facing roof that gets plenty of sunlight throughout the day. If shade covers your roof or it is facing in a different direction, you may need to consider alternative installation options.
- Long-term savings: While solar panels require an upfront investment, they can save you a lot of money on your energy bills in the long run. Be sure to consider the long-term savings potential when making your decision.

Conclusion

In conclusion, solar panels are a great investment for anyone looking to save money and reduce their environmental impact. By generating your own clean energy, you can lower your energy bills, reduce your carbon footprint, and increase the value of your home. Be sure to do your research, check for grants, and ensure that your home is suitable before making a purchase.
